ON THE COVER:

Georgian Residence, 2019 Alberta Masonry Design Awards, Presidential Award

Located in one of Calgary's oldest communities, the clients wanted a home reminiscent of Georgian architecture. Great lengths were taken in research and design to honour the characteristics and remain true to the era of the style. To truly reflect Georgian architecture, brick was cut as little as possible to resemble the craftsmanship when masonry saws were not commonplace. Heavily influenced by Calgary's historical buildings, the selection of brick colour, bond and use of stone trim were crucial to the design and important to meet the era's design standards. Sandstone was selected to complement the orange-red colour of the brick and styled to suit design elements that would have traditionally been seen, including the entryway, various accents pieces, and stone bands.

Message from the Chair

As the Chair of the 2024 Masonry Design Awards and the current Chair of the AMC, I would like to welcome you to the 2024 Alberta Masonry Design Awards. Thank you for coming. It has been an exciting and fun filled adventure working with the design awards committee, all of whom have volunteered their time to help make this event become the success that you see before you. Our esteemed panel of judges really had their work cut out for them, as we received more submissions than ever before. In fact, we had nearly 200 projects submitted, and I can guarantee you the judges had a difficult time choosing our winners. This just goes to show the amount of creativity and innovation that our architecture, design and masonry contractor community's have to offer.

When I started in this industry I didn't know a brick from a block from a rock. All I knew about masonry was from the three little pigs and how the brick house never blew down. Now just about a decade later I can't go anywhere without noticing or stopping to appreciate the masonry around me. From the extreme artistic talent and creativity all the way to a simple firewall, I need to stop, see and learn. If you think about it, masonry is as old as time, that's because in most cases it can withstand the test of time. From Ancient Mesopotamia to China's Great Wall, Egypt to France, Brazil to Mexico and across the USA. From BC to here in Alberta, Saskatchewan all the way to Labrador, the beauty of masonry is all around you.

From the structural to the aesthetic, masonry can be found and be used almost anywhere. It can be used to enhance the beauty of any design, from old world classic or country cottage to a sleek and modern look. It is used structurally, from firewalls to elevator shafts. No matter if it's a fireplace to keep you warm, a school for your children, a police station to keep you safe or a hospital to keep you healthy, there is also a use for masonry.

So, the next time you are out and about, whether you are taking a walk, going camping or traveling the world, stop and look around you, you will be amazed at all the masonry you see. Thank you to all of you, for your continued support and participation in this industry. It's your creations and hard work that add to the beauty, safety and functionality of masonry in our respective communities. I look forward to seeing all the projects that will be entered into the Masonry Design Awards at the events to come.

Georgina Kostiuk

Chair – Masonry Design Awards 2024

Chair – Alberta Masonry Council

Message from Alberta Masonry Council

The Alberta Masonry Council (AMC) would like to thank you for your support of the 2024 Alberta Masonry Design Awards. The vision of the AMC is to provide education, technical guidance and marketing to increase the awareness of the benefits of masonry, as well as promote the use of masonry and masonry products in Alberta. One way this is achieved is through events such as the Masonry Design Awards which recognizes the architects, engineers and designers who design with masonry products and the skilled craftsmen and suppliers who ensure these designs are realized. We thank you for your creativity and ingenuity!

Although masonry has been used for thousands of years, it is still used in new and exciting ways. Modern masonry has proven to be sustainable, green, carbon footprint reducing, energy efficient and adaptable. Architecture that utilizes masonry requires a great deal more skill than other materials in both design and construction. The end product is worth the effort and imparts the timeless architecture that has impressed generations around the globe for centuries.

A heartfelt thanks to you - the architects, engineers, designers, masons, and suppliers and manufacturers of masonry products in Alberta for your continued support of this amazingly versatile building material!

Executive Director,
Alberta Masonry Council
September 2024

THE AMC PRESIDENTIAL AWARD

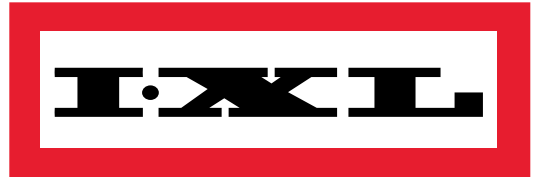

WINDERMERE FIRE STATION NO. 31

- Owner:** City of Edmonton
Design Architect: gh3*
Architect of Record: S2 Architecture
Structural Engineer: RJC Engineers
General Contractor: PCL Construction
Masonry Contractor: Prestige Masonry Inc.
Masonry Supplier: I-XL Building Products

The Windermere Fire Station is a paragon of environmental sustainability and striking civic architecture. Key features of the design, the peaked roof and unique masonry, echo the historical context of fire stations nestled in residential neighborhoods. The exterior brick cladding evokes a distinct stature and gravitas while also allowing play of scale. The sculptural opportunities of brick are apparent in the switch at the window datum from a regular bond to an open, woven pattern. The latter provides visual texture and makes the most of the vibrant Alberta sunshine and intense Prairie shadows. This material approach enables a simultaneous interplay between the fine-grained detail of the brick and the monumentality of the building overall. The open weave pattern gives a texture, grain and visual interest to the large surfaces that it extends across. The pitched gable facing the street is a particularly expansive area of this brick treatment and plays a prominent role in the expression of the project's primary concept, the 'pinching up' of the roof form. The subtle texturing of this area draws the eye across it and along the roofline, amplifying the importance of understanding this large, pitched form in the overall interpretation of the project. The brick is hand-laid by local masons. This was critical to the design intent where extra care had to be paid to achieve the distinctive sweep of the gable, and other custom details windows, entrances and firefighter's patio.

A Lifelong Bond

By Elizabeth Songer, Architect AAA FRAIC

I grew up in the clay-rich mountains of East Tennessee. As a child, I saw brick everywhere: brick walkways, brick buildings downtown, brick smokestacks, brick garden walls, and of course, brick houses.

My own home was a nice mottled brick on the lower level while a beautiful blue-green layer of 60s clapboards housed the upper level. The attached garage was entirely brick as was the tall chimney that connected the floors. The brick bond itself was simple, good old running bond, but it had two smoothly curved brick screens, one that protected the recessed entry and another at the house's edge. That gave it a little flair.

I loved the brick on our house. Just by looking at the ogee screen wall, I could sense the mason's pride in his work. I touched that double-wythe wall every time I walked past it, thinking of the hands that had laid the brick and skillfully

shaped the S-curve. Other girls were enamored with the variety of clothes to dress their Barbies in; I was enamored with the variety of color and shape of all the brick in my neighborhood. I suppose I was always meant to be an architect or a mason. I stuck with architect, given that my math and drawing skills were a lot better than my back-buttering.

Even the language of brick has a playful narrative quality to it that sparked my imagination. It was easy to remember "soldiers"; they stand neatly in formation as any good serviceman would. "Sailors" take up a bit more space hoisting broad sails out on those ships of theirs. When they come to port, the sailors inevitably go to the bar with the soldiers, get into a brawl or two, and fall down on their sides, waking up with "shiners" (some occasionally needing to be carried out on a "stretcher"). Later on, when I went to college in New England, I expanded my brick vocabulary to include glazed brick and raked joints. I was thrilled to discover that many campus buildings were strewn with delightfully-named "klinkers". So many playful possibilities.

My childhood love for brick has continued into adulthood. When my future husband sent me a photo of his house in Lethbridge, I commented on the beautiful off-white and terracotta stonework below the rock dash façade. He, poor man, was hoping I would notice his carefully planted flower beds.

Our ogee wall was a double-wythe wall. The outside of our house was brick, and the inside had exposed brick too, so clearly, all brick walls were double-wythe. At 8 or 9 years of age I was horrified when my father explained that the reason we couldn't see the second wythe of brick inside the all-brick garage was because it was used strictly for protection from the elements. The structure was wood. I remember feeling I had been lied to. The brick was cheating.

Little did I know what lay ahead in the trends of brick use. A single wythe of brick is bad enough; then came thin brick. I hated it at first, but as an architect, I can appreciate the desire to keep the earth material in a project that does not have the budget for full brick.

But even worse brick injustices would cross my path. My firm led a project that was converting an entire floor of a century-old stone-faced masonry building into a large private office space. Once gutted, we found the space had many plaster and brick historic elements waiting to be appreciated. In the new design, the owner was excited to include as many of these elements as he could. He was especially excited about having the informal staff room against a wall of exposed brick. Unfortunately, in the most efficient layout, the staff room's location wasn't near any of the historic masonry. We saw just as much beauty in letting more client-driven areas of the office feel the effect of 100-year-old clay warming the room around them. Nevertheless, the client was so firmly set on having "old" brick for his staff that he ended up facing a new gypboard wall in the staff area not with thin brick, not with a brick-like ceramic tile . . . But brick wallpaper.

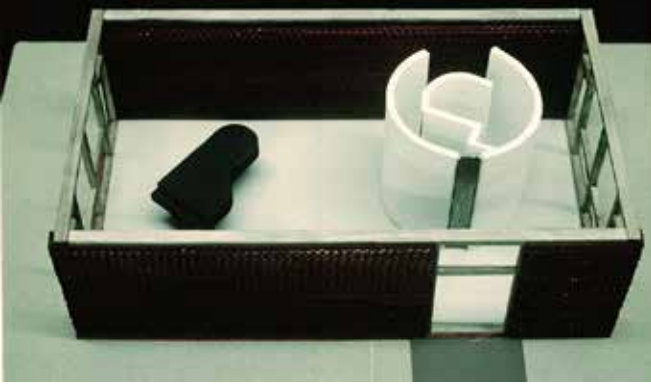

Masons and architects alike have seen how the persistent race to the bottom dollar distracts clients from value. When brick is replaced with vinyl, far more is lost than what is saved. Because of its durability, and likely due to humanity's ancient tradition of using it, brick conveys feelings of strength, longevity, being planted and unfaltering, being of the earth. Its material is kind to our bodies and minds: it's breathable, natural, calming, warm. Heck, it's even romantic. It's hard to make it through a Hallmark movie without seeing adorable historic brick homes in the small town where true love is about to strike.

I take pride in designing buildings that are both beautiful and functional; certainly, a building keeps the rain and cold out, but when it can do that and support more than the rudimentary needs of those inside, all the better. Beyond office and washrooms, most buildings SONGER architecture inc works on have a beating heart: a place to come together in celebration or in purpose beyond basic shelter. We use shape, light, material, and texture to encourage a specific route, create awe, or inspire curiosity. Through these tools our designs bring true functionality including the emotional effect to achieve the clients' vision. I particularly love the projects in which we have used masonry to help achieve those goals. I have tried to do my younger self proud. In fact, 8-year-old me would be thrilled to know that I also have invented my very own brick bond, known to the members of my grad school architecture studio in the 1990's as Beth Bond.

Beth Bond, like many brick bonds, was born of necessity. My class was assigned a project to design a 20x40' stand-alone building. The longer walls had to be brick; the shorter walls, fully glazed. The building was to have a concrete slab, tar and gravel roof, a small water closet, and a furnace. As a student, I was new to tar and gravel roofs, but I was excited to have brick walls. Then I learned what the building's purpose was: it was supposed to be a rehearsal and performance space for a Bösendorfer 9½ foot Concert Grand Piano.

I thought I knew brick, but having grown up in a very musical family, I definitely knew pianos, and let me tell you, the building's purpose changed everything about how I would approach this project. No self-respecting pianist would play an instrument of that quality between two parallel brick walls. My acoustician father would cover his ears in anticipation. If I kept the walls strictly as they were shown, the reflection of the sound waves would bounce off the hard brick surface and across the room repeatedly, creating a cacophony of uncontrolled sound bouncing across the room like an out-of-control rubber ball.

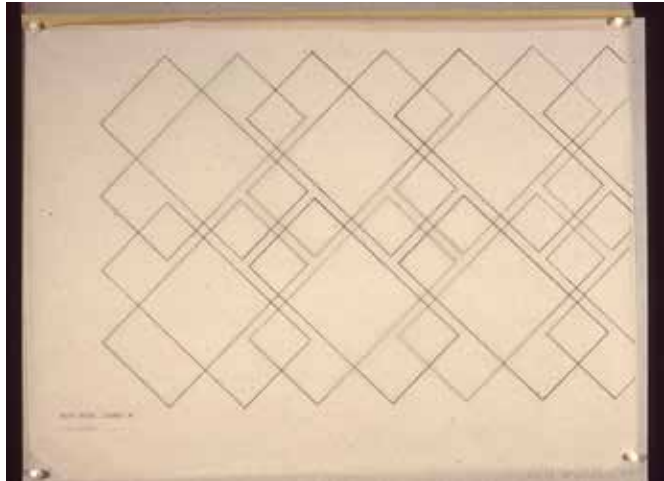

So how to stop this from happening? The assignment requirements were set. To counter the highly reflective box, I housed the mechanical and washroom in a gypsum board cylinder whose rounded surface would spread soundwaves rather than reflect them straight back.

I realized I had one more factor I could control: the brick. Unlike the disappointing garage facades of my childhood, these were true double-wythe walls, which gave me some room to play. I considered calling for raked joints and scored bricks, or even using klinkers to further break up the sound. Any of these measures would have helped to dissipate the soundwaves and reduce the reflectivity of the brick, but they wouldn't have had a big enough effect on the final quality of sound. The booming power of a Rachmaninoff sonata would have caused headaches for those trying to enjoy it; the subtleties of a Chopin nocturne would have been lost in the wash of noise bouncing back and forth between the walls. I had to find a way to break up the sound and hinder the reverberation time which would surely overpower the space.

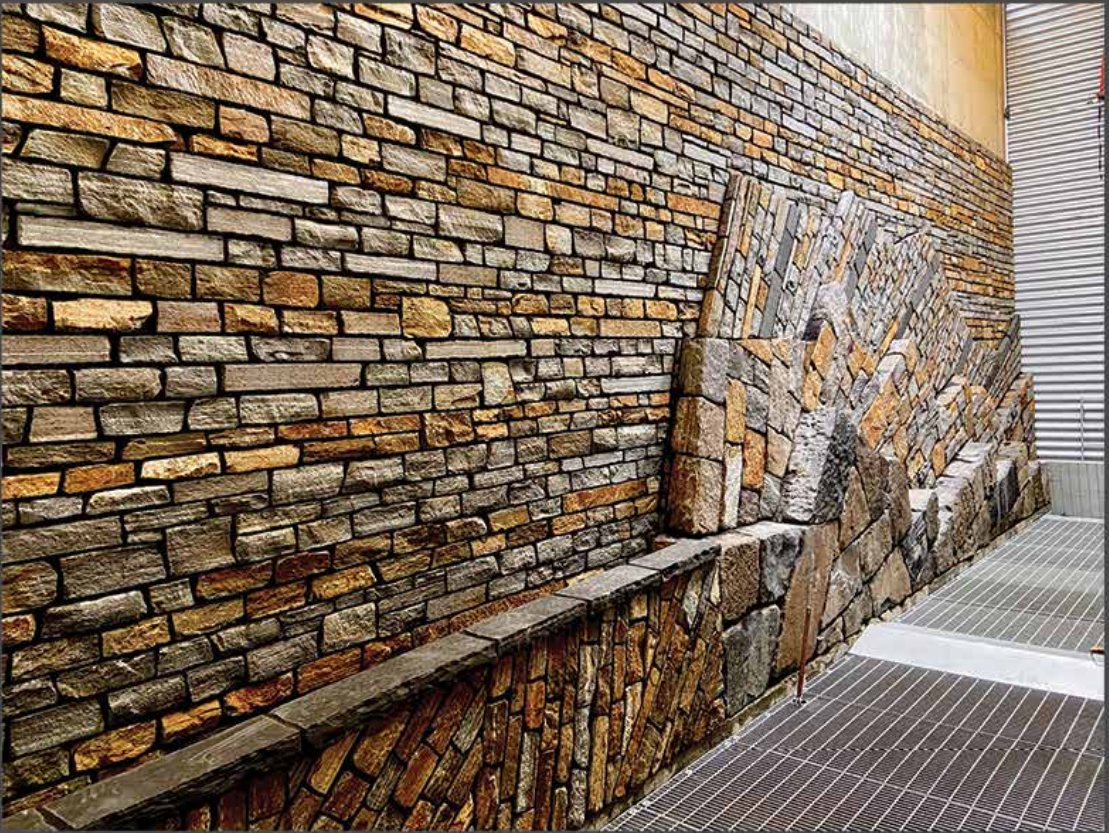

To do this, I played with the orientation of my beloved brick. I turned every brick on its head, well on its corner, with every brick set at 45 degrees, turning the walls into vertical seas cresting with terracotta waves. The humble brick, simple enough that even a child could grasp its shape, was the secret ingredient in an elegant architectural solution to a challenging acoustic problem. Beth Bond was born.

I left the Smoky Mountains long ago and now live near the Rocky Mountains in Lethbridge, in that house with the off-white and terracotta stonework below the rock dash façade and, yes, carefully planted flower beds. My new home is close to clay deposits, and this proximity shows in the brick buildings that Lethbridge boasts. I have had the privilege to shape some of the most iconic brick buildings of my city. Nothing beats the versatility of a simple chunk of clay. ■

THERMAL TIE™ MASONRY CONNECTORS + **FAST THERMAL BRACKET™ OFFSET SHELF ANGLE SUPPORT**

- ✓ Verified best-in-class thermal performance
- ✓ Ideal engineered solution for all cavity sizes
- ✓ Cost-effective, easy installation and on-site adjustability
- ✓ Delegated design and engineering

Wall assembly from recently completed project with 9.5" cavity

FERO Thermal Tie™ Masonry Connectors

- ▶ Industry-leading structural and thermal performance without unnecessary and expensive composite materials
- ▶ High-strength ties allow for increased spacing, larger cavity widths, reduced penetrations and lower costs

FAST Thermal Bracket™ Offset Shelf Angle Support

- ▶ Offset shelf angle from back-up wall with manufactured structural thermal breaks providing near continuous insulation and **improving thermal performance by 84% compared to conventional shelf angle**
- ▶ Significantly reduce shelf angle costs and make installation easy with smaller and lighter shelf angle

The AMC was incorporated in 2011 by the masonry contractors and suppliers of the Masonry Contractors Association of Alberta (MCAA). Our mission is to promote masonry through education, marketing, and technical guidance to improve the sustainability of construction in Alberta through the aesthetic appeal and durability of masonry.

AMC has a robust and dynamic presence in the architectural construction and engineering communities. We are involved in social media, fostering strong relationships and brand awareness. Hosting prominent events such as the Masonry Design Awards, AMC golf tournament and "Bowling with Architects," facilitates valuable connections with the professionals that specify the use of masonry. Hosting booths and speaking at key trade shows, including the AAA Banff Sessions and the CSC Annual Conference, showcase our innovations and support for the construction industry. Collaborations with architecture and engineering departments at various post-secondary institutions in Alberta reflect our dedication to education and industry advancement. AMC provides technical advising and funding for MITACS/NSERC scholarships, which support market-driven research projects like thermal modeling of masonry, adhered masonry veneers bond strength, masonry tall walls, and shelf-angle testing. These academic collaborations ensure masonry remains innovative, exciting, and relevant in the evolving construction industry. We also support scholarships for Architectural Technologists at SAIT and NAIT, as well as research for the Architectural Program at the University of Calgary.

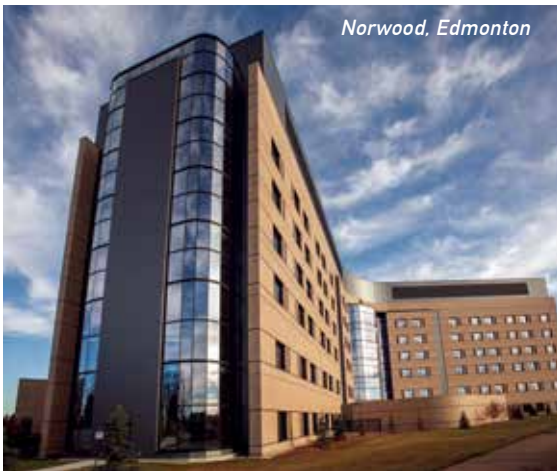

AMC provides free technical advice to a diverse clientele—owners, designers, spec writers, cost consultants, and contractors. This is a core part of our mission. We develop and present accredited educational seminars, popularly known as "lunch and learns," to disseminate crucial knowledge and best practices. Additionally, we create valuable technical aids, including the design of shelf angles, and produce detailed 2D and 3D masonry designs for our website. Our marketing initiatives in this area extend to writing insightful articles for trade publications such as Construction Canada Magazine, ABEC, and IIBEC magazines.

Our government relations advocacy involves engaging with city planners, town and city councillors, Provincial MLAs, and Federal Government MPs to secure architectural controls that mandate the use of masonry, reinforcing our commitment to the industry's growth and sustainability.

Through the efforts of our board and staff AMC will continue to promote, support and grow the masonry industry in Alberta.
